

# Solliquin™

BEHAVIORAL HEALTH SUPPLEMENT

*“I encourage clients to administer a behavioral supplement for at least 4-6 weeks. While some benefits are apparent immediately, the full effect may be more noticeable in the second month of continuous administration.”*

*—Theresa L. DePorter, DVM, MRCVS, DECAWBM, DACVB*

- › Relaxation without sedation
- › Intended for daily use
- › Tasty chewables

Bad behavior is the #1 reason dogs are taken to animal shelters.

In pet cats, behavior problems are still the most common cause of euthanasia.

BEHAVIORAL HEALTH SUPPLEMENT

*A happy pet has a “forever home.”*

Fear and anxiety disorders affect an estimated 23 million dogs in the U.S.

Up to 14% of cats and perhaps 40% of dogs are taken to shelters due to behavior issues.

Fear and anxiety play major roles in a majority of canine and feline behavioral disorders.

- Fear is an emotional response to a specific object, noise, or individual that the pet perceives as a threat or danger.
- Anxiety is a reaction to an *anticipated* threat or danger.

Although some degree of anxiety is normal for a dog or cat, some pets have anxiety that may result in behavior that can make home life difficult. Early intervention allows anxiety to be identified as normal or abnormal.

Activities that we consider to be minor can be viewed by your pet as a major change in their environment or daily routine.

*Solliquins* is designed to help!

*Solliquins* is for dogs and cats to help support normal behavior and facilitate a calming effect.

**Common signs of fear and anxiety in DOGS.**

**Signs in CATS can be slightly different.**

**L-theanine:**

An amino acid found naturally in black, green, and white teas.

**Phellodendron amurense:**

Fruit and bark extracts from the Amur cork tree.

This combination of ingredients provides a one of a kind formulation only available in *Solliquins*.

**Magnolia officinalis:**

An extract from the bark of the magnolia tree.

**Whey protein concentrate:**

A milk protein extract.

Early recognition of anxiety disorders is critical in addressing the progression and intensifying of behavior issues. Intervening early in destructive or other inappropriate behavior can help modify behavior before it becomes difficult to correct.

**Talk with your veterinarian before *little issues* become *big problems!***
